

Allego starts partnership with Shell to operate fast charging at selected Shell stations in the Netherlands and in the United Kingdom

First fast chargers are expected to be operational in 2017.

Arnhem, July 17th 2017. Shell and Allego are working together to install and operate the first fast chargers for electric vehicles at selected Shell service stations. The project will include selected charging sites at Shell stations in the United Kingdom and in The Netherlands. The goal is that fast chargers are expected to be operational at all selected locations by the end of 2017. The first chargers are due to open in Greater London, Derby and the western part of the Netherlands (Randstad).

Shell and Allego are delighted to be working together to bring fast charging capability (50 kW) to selected Shell service stations in the UK and the Netherlands to meet the needs of EV drivers who want to recharge on the go.

Reliable and open charging network

Anja van Niersen, CEO of Allego: "We are proud being a service partner for Shell and that we can contribute to the transition towards cleaner mobility. We are looking forward to support Shell in delivering excellent value to its customers." Allego is monitoring the EV market intensively. "We see that people are willing to shift towards electric mobility. But a lack of appropriate level of charging infrastructure and interoperable charging services is one of their main concerns. Allego and Shell join forces by adding fast chargers at the right service stations. Shell now actively contributes in creating a reliable and open charging network. A network that is accessible for all EV drivers, despite the brand of the car."

About Allego

Allego is a leading CPO (Charge Point Operator) which has significant experience and expertise in e-mobility, including the creation of a network of multi standard fast chargers throughout several countries in Europe. Allego deploys more than 5000 charging points in urban areas and along major transportation routes. Allego focusses on operating and servicing a reliable charging network and EV platform to enable EV drivers to charge whatever Mobility Service Provider they have. Allego facilitates all EV drivers by working with open standards and interoperable services.
